

## Load cells

Wireless load cells, is a new style weight meter. The weighing meter combination of wireless transmission technology, dynamic measurement technology, using digital signal for signal transmission and display. The instrument consists of weighing and display of two major, Weighing in part by the weighing sensor and intelligent measuring instrument, Measurement data send by wireless transmission module, The part of the large-capacity battery supply power. A handheld Display instrument, Power supplied by lithium batteries、Character liquid crystal display. Wireless load cells, both inherited our existing advantages of cable transmission of the weighing instrument, At the same time overcome the transmission distance is short, poor anti-interference ability and cable transmission line easily crushed short comings.. Display instrument is small, light weight, easy to carry and use features.

Range	Shackle Model	Shackle Specification(t)	Shackle Weight(kg)	Load Cell Weight(kg)	Load Cell Material	Remarks
1t	G-2130	3.25	0.76	1.6	aluminum	
2t	G-2130	3.25	0.76	1.7	aluminum	
3t	G-2130	4.75	1.23	2.1	aluminum	
5t	G-2130	6.5	1.79	2.7	aluminum
